**IS VACCINATION BASED ON A SOUND  
IMMUNIZATION THEORY AND PRACTICE?**

---

A **vaccine** is a biological preparation that is believed to improve the immunity of an Individual to a particular disease. A vaccine typically contains an agent that resembles a disease-causing microorganism, and is often made from weakened or killed forms of the microbe or its toxins. This agent stimulates the body's immune system to recognize the agent as a foreign substance, destroy it, and remember it, so that the immune system can more easily recognize and destroy any of these microorganisms that it later encountered.

Antibodies are in the form of immunoglobulin's i.e. IgG-77%, IgA-17%, IgM 3 %, and remaining 3% are IgD and IgE, etc. These immunoglobulin's are like the warriors in the body which work in a harmony and thus

---

defend us from any disease and thus keep us healthy; any defect at this level will bring about a disturbance at the level of the health and thus cause disharmony thus causing disease.

It is very important to understand that the human body is a single unit which works in a harmony and does not work in a divided fashion. If we want to treat an individual we should consider the individual as a whole and not in parts, if we try to treat the individual in parts, we will be bring about an imbalance in the biochemistry, which will make the individual prone to other diseases, for which he/she was not.

When we introduce a conventional vaccine, the vaccine commits to the immune cells of a specific antigens involved in the vaccine, rendering them incapable of reacting to other infections. Our immunological reserve may thus actually be reduced, causing a generally lowered resistance.

Now a day's numerous vaccines are being made mandatory to the new born. It has been proved that such large number of vaccine to the new born is responsible for a number of new diseases in a child. It has also been proved that these vaccines may provide immunity to a particular disease temporarily, thus making the person more susceptible to diseases.

Vaccination may damage children in several ways. Live or attenuated virus vaccination can actually produce the infection that the vaccine is supposed to prevent. Damage can come from neurotoxic materials found sometimes in vaccines.

Vaccine is also related to allergic reactions and the development of an auto-immune response, stimulated by the vaccine and its adjuvant. They are also known to amplify the body's response to the vaccine.

Vaccines contain substances which qualify as "adjuvants." These substances initiate reactionary antibody formation. Common adjuvants used in vaccines irritate body tissues and increase the action of accompanying bacteria and viruses, as well as the reaction of the immune system to the foreign protein antigens, potentially damaging neurological membranes where the myelin sheath has only partially protected the nervous system. This can result in mild to severe neurological damage, leading to learning disabilities and other nervous system disorders, or death, especially upon subsequent injections, since body has already been sensitized, promoting allergic reactions of increasingly severe nature.

---

***Vaccines pose risk. Diseases pose risk.***

*How do we balance the risk from disease with the risk from vaccine.*

*Where does the answer lie?*

---

The question of vaccine-related damage provokes tremendous controversy. Conventional opinion holds that vaccines are good, and those who say that vaccination are bad. Two potentially values operate in this controversy -- first, the desire to eliminate disease, and, second, the desire of parents to protect their children from damage.

**Homoeopathic medicines act at the genetic level.**

When we approach each case we have to consider the individual as a whole and not try to vaccinate the individual by just considering the disease. By understanding the individual as a whole we are able to stimulate the body to repair and bring about a balance in the individual.

We at VITANOVA Homeopathic Clinics study the behavior and expression of the gene of each individual and treat the person.

This holistic approach is required to treat every individual

We at VITANOVA Homeopathic Clinics effectively use Homeopathic medicines as:

Prophylactic: here we improve the general immunity of the individual, thus making the individual resistant to any epidemics etc.

Therapeutic: here we control the spread of disease and remove the bad effects of other vaccines in the individual and try to stimulate the body to repair and bring about restoration of health.
